

Here are the detailed project tasks created for each feature in your ClickUp list, based on your workflow:

Super Admin

- Implement Super Admin authentication and dashboard UI
- Develop organization management for Super Admin
- Build subscription plan management for Super Admin
- Implement global exams and question repository management
- Integrate payment and transaction management for Super Admin
- Create logs and system monitoring for Super Admin
- Develop notification system for Super Admin
- Implement user management for Super Admin

Organization Admin

- Develop Org Admin authentication and dashboard UI
- Implement student management for Org Admin
- Develop Org Users management for Org Admin
- Implement organization question bank for Org Admin
- Build test management for Org Admin
- Develop test assignment features for Org Admin
- Implement live test monitoring and analytics for Org Admin
- Develop certificate management for Org Admin
- Implement subscription management for Org Admin

Subject Expert

- Develop Subject Expert authentication and dashboard UI
- Implement question creation and editing for Subject Expert
- Develop feedback and quality metrics for Subject Expert

Reviewer

- Develop Reviewer authentication and dashboard UI
- Implement question review and approval for Reviewer
- Develop expert performance monitoring for Reviewer

Student

- Develop Student authentication and dashboard UI
- Implement test attempt and navigation for Student
- Develop results and analytics for Student
- Implement certificate download for Student
- Build student test management features

SUB TASKS

Here is a suggested breakdown of sub-tasks for each main task. These sub-tasks will help you organize the work into actionable steps for your team. If you want these sub-tasks created directly in ClickUp, let me know which tasks you want to start with, or if you want all of them created at once.

Example: Implement Super Admin authentication and dashboard UI

- Design login page UI
 - Implement authentication backend (login/logout)
 - Create Super Admin dashboard layout
 - Integrate sidebar navigation for all Super Admin features
 - Display summary cards (organizations, subscriptions, transactions, alerts)
 - Add recent activity and system health widgets
-

Example: Develop organization management for Super Admin

- Design organization listing page
 - Implement organization creation form
 - Add approve/reject functionality
 - Implement status change controls
 - Create organization detail view
-

Example: Build subscription plan management for Super Admin

- Design subscription plans listing page
 - Implement plan creation and editing forms
 - Add price/feature configuration
 - Integrate plan status management
-

Example: Implement global exams and question repository management

- Design exams/subjects/topics management UI
 - Implement add/edit/delete for exams, subjects, topics
 - Create global question repository view
 - Add question delete functionality
-

Example: Integrate payment and transaction management for Super Admin

- Design transactions listing page
 - Implement transaction filtering
 - Display payment details modal/view
-

Example: Create logs and system monitoring for Super Admin

- Design logs table UI
 - Implement system activity feed
 - Add audit log filtering/search
-

Example: Develop notification system for Super Admin

- Design notification composer UI
- Implement broadcast/trigger logic
- Add notification history view

Example: Implement user management for Super Admin

- Design user listing page
 - Implement add expert/reviewer forms
 - Add user status change controls
 - Create user detail view
-

Here are the sub-tasks created for the Organization Admin main tasks:

For "Develop Org Admin authentication and dashboard UI":

- Design Org Admin login page UI
- Implement Org Admin authentication backend
- Create Org Admin dashboard layout
- Integrate sidebar navigation for Org Admin features
- Add dashboard widgets for students, tests, certificates, subscription

For "Implement student management for Org Admin":

- Implement student registration form
- Enable student import via CSV
- Implement group assignment UI for students

For "Develop Org Users management for Org Admin":

- Design Org Users listing page

- Implement add expert/reviewer forms

Here are the sub-tasks created for the remaining Organization Admin features:

Organization Question Bank:

- Design organization question bank UI
- Implement filtering and search for question bank

Test Management:

- Design test management UI
- Implement test creation and editing forms
- Display list of all tests

Assign Test:

- Design test assignment UI
- Enable assignment to organization or groups

Monitor Tests:

- Design live test monitoring dashboard
- Implement test analytics and live status features

Certificates:

- Design certificate templates
- Implement auto-generation and download of certificates

Subscription:

- Design subscription management UI
- Implement buy, view, renew, and update subscription features
- Add subscription status and renewal reminders

Here are the sub-tasks created for the Subject Expert main tasks:

For "Develop Subject Expert authentication and dashboard UI":

- Design Subject Expert login page UI
- Implement Subject Expert authentication backend
- Create Subject Expert dashboard layout
- Integrate sidebar navigation for Subject Expert features
- Add dashboard widgets for questions created, pending review, quality score

For "Implement question creation and editing for Subject Expert":

- Design question creation form (exam, subject, topic, difficulty, explanation, options)
- Implement question editing for AI-generated and own questions
- Enable submission for verification workflow

For "Develop feedback and quality metrics for Subject Expert":

- Display reviewer feedback for questions
- Implement quality score and metrics dashboard

Here are the sub-tasks created for the Reviewer main tasks:

For "Develop Reviewer authentication and dashboard UI":

- Design Reviewer login page UI
- Implement Reviewer authentication backend
- Create Reviewer dashboard layout
- Integrate sidebar navigation for Reviewer features
- Add dashboard widgets for pending questions, approvals, rejections, expert performance

For "Implement question review and approval for Reviewer":

- Design pending questions review interface
- Implement approve/reject and comment features
- Add difficulty verification and feedback UI

For "Develop expert performance monitoring for Reviewer":

- Design expert performance metrics dashboard
- Implement analytics for expert performance monitoring

Here are the sub-tasks created for the Student main tasks:

For "Develop Student authentication and dashboard UI":

- Design Student login page UI
- Implement Student authentication backend

- Create Student dashboard layout
- Integrate sidebar navigation for Student features
- Add dashboard widgets for tests available, completed, certificates, ranking

For "Implement test attempt and navigation for Student":

- Design test attempt UI (start, timer, navigation, submit)
- Implement question navigation and answer submission
- Add timer and progress tracking features

For "Develop results and analytics for Student":

- Design results and analytics UI
- Implement question-wise analysis and topic strengths/weaknesses
- Add percentile, ranking, and suggested revision topics

For "Implement certificate download for Student":

- Design certificate download UI
- Implement certificate download functionality

For "Build student test management features":

- Design student test management UI
- Implement test creation and editing for students

All sub-tasks for the Student role are now created. If you need further breakdowns or have other requests, just let me know!
